Introduction

This course will provide you with an in-depth overview of the tools you need to prepare respond to and manage construction claims. You will learn how to correctly identify situations that give rise to a claim, how to calculate the value of a claim and how, by way of a step-by-step process, to compile a claim submission into a persuasive argument which will help the claim to succeed. The course also deals with the analysis of claim submissions and the preparation of responses to claims.

Objectives & Benefits

- A correct understanding and the proper management of construction claims
- Understanding the bottom line of construction projects whilst maintaining goodwill between the parties.
- Understanding of why and how a claim should be submitted and a response prepared.
- Manage claims effectively, to escalate the cost and time consuming disputes.
- Analysing the contract documents and the parties' performance throughout the project time.
- Identify causes of impact, the effect of those causes on a project, and the associated quantification of damages.
- A good understanding of the science of claims is valuable assets to their employers, because they can increase the profitability of projects. Even in times of recession, there is a constant demand for skilled professionals in this field.

Methodology:

- Data show lectures
- Workshop discussions
